

## Who we are

Back in 2008, Upstream began from humble beginnings in Cape Town, Western Cape. We now have multiple offices within South Africa as well as a dealer portfolio of companies supplying and supporting our exclusive range of products, nation wide.

Our constant strive for perfection and innovation has been seen by many as the reason for our continued growth and success in this ever-changing market.

We're a company dedicated and focused solely on the supply, installation and management of the latest breed of voice and data connectivity solutions in South Africa.

We offer a comprehensive range of services capable of serving the needs of all clients, be it for cutting-edge Wireless or Fibre connectivity or easy-to-operate voice and data solutions, in small, medium, or large environments.

C O N N E C T

Your internet &  
telecoms service  
provider

## Our Vision

Our vision is simple, to be a world class Telecoms provider in Southern Africa satisfying the needs of all businesses requirements from small to large enterprises, offering only the latest and most advanced products and services available today.

## Our Core values

Customer Service Excellence

Accountability & Transparency

Honesty, Integrity & Objectivity

Being a Learning & Caring Organisation

Mutual respect for staff, suppliers & customers

## Cellular Platform

Our Cellular based platform uses ICASA approved, Tier 1 Wireless networks with ECNS and IECNS license accreditation to provide an easy, secure and stable alternative to fixed line operators.

## VOIP Platform

Voip Technology is the latest breed of unified communications available today. Our state of art Porta one ® voice switch housed at Terraco offers a full range of voice, video and converged solutions on one platform. This is all used using Fibre links between all major networks in SA.

## Connectivity

### FIBRE

We use the fastest and most reliable technology for data transmission via fibre optic. This offers symmetrical speeds, low latency with maximum uptime.

### WIRELESS

This technology uses wireless broadband technology on a licensed spectrum with a fibre optic backbone delivering a reliable and robust internet service covering most of the major metropolises in SA.

### LTE APN

LTE makes use of Cellphone 4G towers to deliver a fast and easy to deploy internet connection with speeds of up to 100mbps for all your data and voice needs.
